# VAICO

ENGINE & TRANSMISSION PARTS  
BY VIEROL

The VAICO quality brand stands for high-quality automotive parts. Our focus is therefore on the heart of the car: the engine and the transmission.

As a specialist in the independent parts market, and one that is known worldwide, we offer an extensive range of products, from suction modules to venting hoses and cylinder head covers. We cover more than 13,000 different vehicle models.

Our VAICO parts even cover 95 per cent of the German vehicle market. Whether transmission filters and sets, oil pans, or housing – VAICO offers the best quality products. Suitable transmission oil is also available, in addition to engine oil, antifreeze or additives.

Our range has been bolstered by innovative repair sets from the Expert Kits+ selection. These kits include sets for changing oil, repair kits with hoses and venting valves or transverse control sets. The Q+ seal identifies parts with OEM quality, just like those made by the original equipment manufacturers.

Our competent expert team works everyday to optimise our VAICO automotive parts and to extend our range. Our aim is to have satisfied customers all around the world.

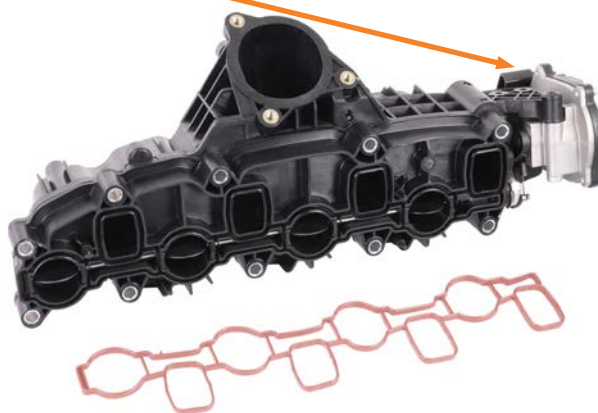

## INTAKE MANIFOLD MODULE

The intake manifold module mixes the recirculated exhaust gases with cooled air and then returns it to the individual cylinders. This air flow is regulated by swirl dampers, which become soiled with soot over time. As a result, these flaps no longer close completely or their movement is restricted. The consequence: error messages in the vehicle and deteriorated engine performance.

VAICO offers high-quality intake manifold modules for the most common applications. Our VAICO products are made of high-quality PA66GF30 material. This is characterised by excellent wear behaviour and high heat resistance. One hundred percent quality checks during production and coordinated welding procedures ensure a flawless, long-lasting product.

All VAICO intake manifold modules are supplied including seals and other necessary components. Further measures such as pre-assembly and synchronisation of the servomotor guarantee optimally matched components and thus a faultless function.

## FROM THE EXPERT RECOMMENDED

The actuator must be taught. Often the synchronisation between the actuator and the intake module does not work.  
**THEREFORE:**

- › Pre-assembly by experts
- › Synchronization between actuator and intake module
- › Optimally matched components
- › Functional control by means of the latest analysis technology
- › Fault-free function guaranteed
