VEMO

ELECTRONIC PARTS BY VIEROL

VEMO is the quality brand for high-quality electronic automotive replacement parts. With more than 15,000 VEMO replacement parts, we cover numerous models from European, American and Asian vehicle brands.

We are particularly proud of our range of sensors and switches:

VEMO offers more than 4,000 different replacement parts such as parking sensors, sensors for crankshafts and camshafts, air flow meters, steering column switches, thermal switches and much more. Whether for sensors, switches, small engines, replacement parts for exhaust gas recirculation or products for vehicle inspections – VEMO offers the best quality. We are therefore the perfect alternative to the original part manufacturers.

We offer smart repair kits in the EXPERT KITS+ section – from practitioner to practitioner – thus also helping you to save time. The Q+ seal identifies replacement parts with OEM quality, just like those made by the original equipment manufacturers.

15 experts work every day to expand the range constantly, and to ensure continuous quality improvements for the VEMO products. Clients from numerous countries already trust us – time for you to get to know us too!

DOOR LOCKS

Today's central locking systems are prepared for vibrations but are not completely resistant for it. These door locks have relays, electric motors, switches, sensors, and control units.

By operating the key via radio frequency or mechanical unlocking on the vehicle itself, an impulse from the control unit is sent to the electric motors, which locks or unlocks the door.

A door lock which then no longer closes or jams is rather an obstacle for the driver.

Not only heavy vibrations caused by the constant opening and closing of our vehicle door, which could lead to a breakdown, but also dirt, dust, moisture or frost that have a major influence here.

With VEMO, we can help you in long term. Our door locks are designed to comply with the manufacturer's standards and of course to have the quality of the original equipment manufacturer.

Due to our high market coverage and strong availability, we guarantee to always find the right lock for your vehicle.

WHY ELECTRIC LOCKS?

One reason for electric locks is central locking with remote control, which is not possible with mechanical locks. Electronic locks can also be used to control, for example, that the interior lights come on or that the display shows that a door is not properly closed.

1

2

WHY DO THEY NEED TO BE MAINTAINED OR REPAIRED?

Repairs of electric locks are necessary if, for example, malfunctions occur due to electronic defects or locks no longer open and close at all. It may be necessary to grease mechanical/moving parts.

3

INDEPENDENT WORKSHOPS ARE ABLE TO CARRY OUT THE WORK

The electric locks fit plug & play. If necessary, only door panels need to be installed and removed. Any independent workshop should be able to carry out this work without any problems.

4

VEMO PREMIUM QUALITY

Electric door locks from VEMO consist of components in tested premium quality. They convince with easy assembly through plug & play installation, weather- and temperature-resistant material and long service life even under high load.

5

RANGE COVERAGE

Extensive range with approx. 500 different references, covering approx. 95 % of common vehicles.

DOOR LOCKS, ELECTRICAL

LOCKING SYSTEM | 30003

FUNKTION

Today's central locking systems are prepared for vibrations but are not completely resistant for it. These door locks have relays, electric motors, switches, sensors, and control units.

By operating the key via radio frequency or mechanical unlocking on the vehicle itself, an impulse from the control unit is sent to the electric motors, which locks or unlocks the door.

A door lock which then no longer closes or jams is rather an obstacle for the driver.

Not only heavy vibrations caused by the constant opening and closing of our vehicle door, which could lead to a breakdown, but also dirt, dust, moisture or frost that have a major influence here.

With VEMO, we can help you in long term.

Our door locks are designed to comply with the manufacturer's standards and of course to have the quality of the original equipment manufacturer.

Due to our high market coverage and strong availability, we guarantee to always find the right lock for your vehicle.

SYMPTOMS

- Rattling of the door while driving
- Door no longer locks
- No electronic or even mechanical opening of the door
- Central locking system failure

REASONS FOR FAILURE

- Intern short-circuit
- High dirt, moisture and/ or Frost
- Strong vibrations from opening and closing the door

ASSEMBLY AND SAFETY INSTRUCTIONS FROM A SPECIALIST

- The manufacturer's information should be observed when dismantling or installing the coverings
- Damaged retaining clips should be replaced (causes damage to fairing parts)
- Ropes and Bowden cables should be fixed in the brackets provided for this purpose, otherwise there is a risk of damage or impairment to the door lock
- Check the new door lock with the door open (check function and fits)

If the door is closed and the function of the door lock is impaired by an installation error, it can lead to the door being destroyed

- The manufacturer's electronic diagnostic facility should be used to check and function the door lock
