ENGINE & TRANSMISSION PARTS  
BY VIEROL

The VAICO quality brand stands for high-quality automotive parts. Our focus is therefore on the heart of the car: the engine and the transmission.

As a specialist in the independent parts market, and one that is known worldwide, we offer an extensive range of products, from suction modules to venting hoses and cylinder head covers. We cover more than 13,000 different vehicle models.

Our VAICO parts even cover 95 per cent of the German vehicle market. Whether transmission filters and sets, oil pans, or housing – VAICO offers the best quality products. Suitable transmission oil is also available, in addition to engine oil, antifreeze or additives.

Our range has been bolstered by innovative repair sets from the Expert Kits+ selection. These kits include sets for changing oil, repair kits with hoses and venting valves or transverse control sets. The Q+ seal identifies parts with OEM quality, just like those made by the original equipment manufacturers.

Our competent expert team works everyday to optimise our VAICO automotive parts and to extend our range. Our aim is to have satisfied customers all around the world.

## CYLINDER HEAD COVER

Cylinder head covers close the cylinder head and form the upper closure of an internal combustion engine. In current vehicle models, they also integrate other components such as oil separators, pressure control valves, non-return valves or vacuum tanks.

These complex components protect the valve train mounted on the cylinder head from external influences such as dust, dirt and moisture, act as sound insulation and reduce exhaust emissions by reducing oil consumption.

The bonnets are made of highly stable thermoplastic and thus more than meet the high requirements in the engine compartment (high loads, high temperatures).

Due to the high loads, regular maintenance and inspection (Expert Tip: At every major service) is of great importance in order to detect and rectify potential problems at an early stage.

Cylinder head cover problems can have a serious impact on engine performance and functionality. Leaky bonnets can lead to oil loss, overheating and reduced performance.

## CYLINDER HEAD COVER

AIR CONTROL SYSTEMS | 11103

### Function

In many modern four-stroke engines, the cylinder head cover houses the upper actuation elements of the engine control unit as well as the valves in the crankcase ventilation with all its peripheral devices.

It also prevents leakage of the lubricants in the environment. Additionally, it protects the engine from dirt or other foreign objects.

### SYMPTOMS

- Seal is leaking: Vehicles leak oil
- Smell of oil when running
- Valves blocked: jerky engine running, in extreme cases the engine light lights up until engine damage occurs

### REASONS FOR FAILURE

- With advanced mileage
- the following problems arise:
  - Seals become leaky and have to be replaced
  - Integrated valves for the crankcase ventilation clog up frequently
  - Holders of the cylinder head covers tear if improperly mounted and also sometimes due to age

### CONSEQUENTIAL DAMAGES

- Engine oil leaks out
- The engine does not run smoothly

### CYLINDER HEAD COVERS FROM VAICO

You will find these and other articles from the cylinder head covers section at [www.vierol-shop.de](http://www.vierol-shop.de)

- Material according to OE
- with integrated valve
- delivery including seal in polyacrylate rubber (ACM)
