VEMO

ELECTRONIC PARTS BY VIEROL

VEMO is the quality brand for high-quality electronic automotive replacement parts. With more than 15,000 VEMO replacement parts, we cover numerous models from European, American and Asian vehicle brands.

We are particularly proud of our range of sensors and switches:

VEMO offers more than 4,000 different replacement parts such as parking sensors, sensors for crankshafts and camshafts, air flow meters, steering column switches, thermal switches and much more. Whether for sensors, switches, small engines, replacement parts for exhaust gas recirculation or products for vehicle inspections – VEMO offers the best quality. We are therefore the perfect alternative to the original part manufacturers.

We offer smart repair kits in the EXPERT KITS+ section – from practitioner to practitioner – thus also helping you to save time. The Q+ seal identifies replacement parts with OEM quality, just like those made by the original equipment manufacturers.

15 experts work every day to expand the range constantly, and to ensure continuous quality improvements for the VEMO products. Clients from numerous countries already trust us – time for you to get to know us too!

AIR SPRING SYSTEMS

Air springs, electronic shock absorbers, control units (ECU), air compressors and more!

The air compressors play a special role in the system. Through the electric compressor and the control valves, it is possible to change the pressure ratios in the air spring for suspension adjustment and thus have a significant influence on ride comfort. The compressor consists of an electric motor, compressor and pressure tank. Sensors control the system to regulate the pressure in the air spring for optimal driving conditions.

The air spring, like all rubber components, is a wearing part. Most problems in the area of air suspension are caused by breakage or wear of the air spring. Another source of error is in most cases not the compressor itself, but the associated relay. A defective, faulty relay causes the compressor to be permanently controlled electrically and leads to malfunctions and failure in the air suspension compressor. Fabio Klotz recommends changing the relay when replacing the compressor.

The specialists at VEMO have developed a customised complete solution for the replacement. The practice-oriented repair kits contain the air compressor and the matching relay. This has resulted in further repair kits with the EXPERT KITS seal – the award for the simplest and most time-saving maintenance possible.

The VEMO air suspension range includes air suspension dampers and/or air suspension with separate electronic shock absorbers, electronic control units (ECU), air compressors, control valves, pressure tanks, level sensors and relays.

With the VEMO air suspension repair kits, workshop professionals make the right choice. The EXPERT KITS+ not only make it easier to find the individual components, but they are also precisely matched to the respective vehicle, so that a repair is a piece of cake.

EXPERT KITS+

COMPRESSOR, COMPRESSED AIR SYSTEM AS EXPERT KIT+ WITH RELAY

The compressor in a car's air suspension adjusts the vehicle height and improves ride comfort. It consists of an electric motor, compressor and pressure tank. Sensors control the system to regulate the pressure in the air suspension system for optimal driving conditions.

A faulty relay, also called a "holding relay", can cause the compressor to fail, causing it to overheat and lose its function. It is therefore recommended that the relay is also replaced when the compressor is replaced.
